

## DM54366/DM74366 Hex Inverting TRI-STATE® Buffers

### General Description

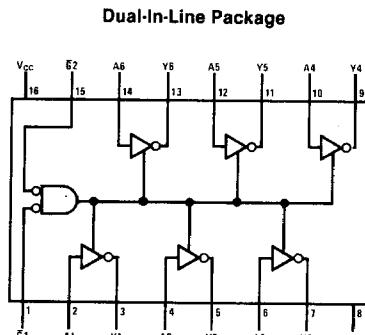

This device contains six independent gates each of which performs an inverting buffer function. The outputs have the TRI-STATE feature. When enabled, the outputs exhibit the low impedance characteristics of a standard TTL output with additional drive capability to permit the driving of the bus lines without external resistors. When disabled, both the output transistors are turned off presenting a high-impedance state to the bus line. Thus the output will act neither as a significant load nor as a driver. To minimize the possibility that two outputs will attempt to take a common bus to opposite logic levels, the disable time is shorter than the enable time of the outputs.

### Absolute Maximum Ratings (Note 1)

Supply Voltage	7V
Input Voltage	5.5V
Storage Temperature Range	-65°C to 150°C

Note 1: The "Absolute Maximum Ratings" are those values beyond which the safety of the device can not be guaranteed. The device should not be operated at these limits. The parametric values defined in the "Electrical Characteristics" table are not guaranteed at the absolute maximum ratings. The "Recommended Operating Conditions" table will define the conditions for actual device operation.

### Function Table

Input		Output
$\bar{G}_1$	$\bar{G}_2$	$Y$
L	L	L
L	L	H
H	X	X
X	H	Hi-Z

$$Y = \bar{A}$$

H = High Logic Level  
 L = Low Logic Level  
 X = Either Low or High Logic Level  
 Hi-Z = TRI-STATE (Outputs are disabled)

Note 1: All typicals are at V<sub>CC</sub> = 5V, T<sub>A</sub> = 25°C.

Note 2: Not more than one output should be shorted at a time.

Note 3: I<sub>CC</sub> is measured with the data inputs grounded and the output controls at 4.5V.

Note 4: Both G inputs are at 2V.

Note 5: Both G inputs are at 0.4V.
