

# ***YAXUN Soldering Iron 80W***

## ***Model: YX-521***

### **Specifications:**

- Operating Voltage: AC240-200V 50Hz
- Output Power: constant temperature operating 80W
- Breakdown Voltage: more than 1200V
- Temperature Range: 180-480°C
- Temperature Calibration: the error is less than  $\pm 4^{\circ}\text{C}$  after the temperature calibration.
- Soldering Iron Tip Specifications: 900 series soldering iron tips.
- Heating Element: 936H heating element.
- Replacement of Heating Head: Direct plug-in type (connected by socket).
- Failure Alarm: poor content of EUS power socket.
- EAO heating element open circuit.
- E01 strong electromagnetic interference.

### **Precautions:**

- When replacing the heating element, be sure to separate the power plug of the electric soldering iron from the power socket, otherwise there will be a risk of burns and electric shock.

*Made in China*
