

## Fast, Easy, High Powered, Fully Functional FILTER SOLUTIONS® Filter Design Software

# The Best in Filter Design Software

[Download Brochure](#)

Filter design software from Nuhertz Technologies® provides fast, easy to use, and high powered solutions to electrical engineering challenges in synthesizing, analyzing, and simulating complex filter designs. Originally released in 1999, the flagship program, FilterSolutions® has continued to incorporate and introduce new and useful features and topologies. The program features "Quick" and "Advanced" user design panels for maximum design flexibility and a built-in skills upgrade path. The interoperability of FilterSolutions software is being continuously enhanced with "best-in-class" industry applications. Included in the linked capabilities are: artwork generation tools; circuit simulators; physical measurement models; S-Parameter and Spice component models and electromagnetic analysis programs.

FilterSolutions' software modules are used by design engineers in many and diverse disciplines such as communication systems, military electronics, medical, instrumentation, oil exploration and antenna design, etc. The program is used in a variety of disciplines by designers and manufacturers of IC, MMIC and RFIC designs.
