

## PowerSuite

### This is a legacy product

This Product is Obsolete

PowerSuite for PC Software Workshop designed for setting up Altivar drives, Altistart starters and TeSys® model U controller-starters

- **Features**

- 

In disconnected mode:

- Preparation and memorization of configuration files: save to hard disk, CD-ROM, floppy disk, etc
- Printing configurations
- Exporting to desktop applications

In connected mode:

- Configuration, adjustment, control and monitoring of the drive or starter
- Transfer and comparison of configuration files between PowerSuite and the drive or starter
- Possibility of connecting to an Ethernet network
- Software available in 5 languages: German, English, Spanish, French and Italian

## Benefits

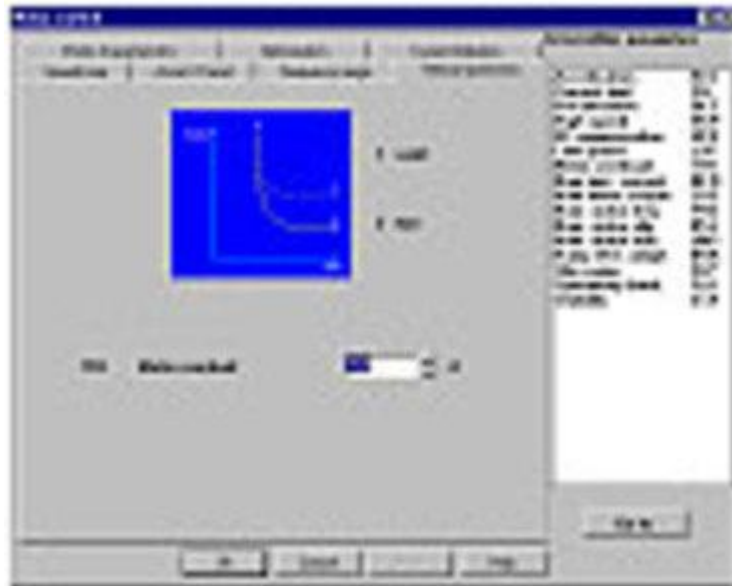

**Simple** and user-friendly, the PowerSuite Software Workshop makes it easy to configure Telemecanique variable speed drives and starters.

With a single software program, you can configure all Altistart and TeSys® model U starters and all Altivar drives.

**Open**, with its Ethernet connection, you benefit from remote accurate data in real time while running your machines.
